

Feedback about Axel PERIGNON

During his University studies in Computer Science, Axel Pérignon studied in several courses under my responsibility, both in bachelor's and master's degree in Computer Science at the UFR Sciences et Techniques of the University of Toulon. These lessons cover fundamentals such as systems and computer architecture, but also methods in signal processing and classification that is commonly found in automatic speech recognition.

During these various teachings, Axel Pérignon has shown that scientific curiosity and sought to understand the principles with which he was confronted. Whatever the problem he encounters, Axel attacks it calmly and methodically in order to solve it and master the process.

Axel's academic mindset has always been oriented towards the field of research. Already in his bachelor's degree, he completed a voluntary internship in research, and this year again, for his final year internship in computer science, Axel chose to do an internship in a research laboratory. In addition, Axel's supervisor in the laboratory seems very satisfied with the progress of his internship.

In conclusion, I think that Axel Pérignon has qualities and assets that allow him to be a good member and succeed in what he does.
